

Eric Wade

Eric Wade is an environmental social scientist at Oregon State University, originally from Belize. His research interests lie in three main areas, human dimensions of conservation, environmental governance, and conservation and development. His current work explores the decision-making strategies and behaviors of small-scale fishers in the Caribbean and its link to informing sustainable fisheries management. He has worked in communities across Belize, Jamaica, St. Lucia, and Panama, all within the GCFI region. Eric has worked across sectors, including local non-governmental organizations, governmental departments, and regional bilateral agencies in the Caribbean.
